

Acquiring Performance Map Australia

New Data Strategy

April 2025
Mastercard Advisors – Performance Analytics

The Performance Map has been shared with several Acquirers in Australia to analyze market share and understand market share performance and market trends.

Project context

The report has been shared with **key players in the industry**, including NAB, ANZ, CBA, Westpac, Adyen and others.

In compliance with **Mastercard's data privacy regulations**, a robust **data strategy** is essential for delivering the report in an effective and informative manner.

Examples of deliverables:

Working with entire country information necessitates handling large amounts of data, which introduces the challenge of managing complex data processing tasks

Project context

The **previous data process** approach involves using Hadoop as the data source, Python for data management, and Excel/PowerPoint for report generation. However, this method **faces challenges related to the complexity of the data strategy and long execution time**.

The primary pain points include:

- Inability to deliver reports to **all Acquirers simultaneously**;
- **Long execution time** for each Acquirer;
- **Complicated data process** that requires **manual code changes**;
- Insufficient documentation;
- **Reliance on manual steps**, specially with Excel and PowerPoint.

The challenges presented an **opportunity to create a new data strategy** aimed at **enhancing time efficiency** in report delivery and possibility of **deliver to different customers simultaneously**

The new data strategy emphasizes best practices and simultaneous execution, prioritizing both time efficiency and the quality of data

New data strategy process

Previous data strategy process

The **previous data process** approach involves using Hadoop as the data source, Python for data management, and Excel/PowerPoint for report generation. However, this method **faces challenges related to the complexity of the data strategy and long execution time**.

The primary pain points include:

- Inability to deliver reports to **all Acquirers simultaneously**;
- **Long execution time** for each Acquirer;
- **Complicated data process** that requires **manual code changes**;
- Insufficient documentation;
- **Reliance on manual steps**, specially with Excel and PowerPoint.

New data strategy development

Key takeaways of new process

A **new data process** method has been established leveraging best practices in data strategy, allowing us to produce reports more **swiftly, accurately, and with enhanced views and KPIs**.

The main highlights are:

- **Delivery to all Acquirers simultaneously**, by concurrent execution across all participants in the country;
- **Significant reduction in execution time** and manual interventions;
- **Minimal need for extensive manual code** alterations;
- Automation designed for **easy development of new views and KPIs**;
- Options for various delivery formats: **PDF report, Tableau Dashboard, and CSV data**.

The new data strategy emphasizes best practices and simultaneous execution, prioritizing both time efficiency and the quality of data

New data strategy process

The simultaneous execution across all Acquirers establishes a distinctive data extraction method, wherein all necessary data is consolidated into a single table.

- Easy maintenance
- Less processing time
- Mapping tables easily identified
- No hard-code changed needed

The new method significantly decreases execution time, and this reduction can be translated into improved margin efficiency or additional hours to gain further market insights for the Acquirers.

Previously, it was taking between 5 to 7 business days to generate the report for a single acquirer. If a report for the top 10 acquirers was required, it would have taken ~53 days. Now, we will complete this task in just 4 days.

5 *Typical development time required to deliver to 10 acquirers, it may vary if the delivery involves a different number of players and views

The new data strategy emphasizes best practices and simultaneous execution, prioritizing both time efficiency and the quality of data

Estimation of efficiency of one quarter delivery

Implementing a **strong data strategy** requires **multiple steps**; however, when a **well-defined objective** is established and **developed according to best practices** that support **data automation, significant efficiency** can be achieved.

By leveraging time efficiency, we can provide our customers **more insights**, increase the number of **deliverables types**, and potentially **improve project margins**.

6 *Typical development time required to deliver to 10 acquirers, it may vary if the delivery involves a different number of players and views

The dashboard usage brings more flexibility when analyzing the data, and make it easier to understand the performance across different players in the market

Interactive Dashboard

The new data strategy enables the delivery of additional data formats, allowing our customers to integrate this data into other tools and use it for additional use cases

Same delivery, different formats

1 PDF Report

PDF easily generated from the Dashboard

Sharing a PDF file via email is quick and convenient, making it a lightweight option for sending the report.

2 Interactive Dashboard

Interactive Tableau Dashboard

A good choice for enhancing performance review meetings, fostering more engaging conversations.

3 Database

CSV files with all detailed data

Our clients can utilize it within various internal tools or even integrate it into AI models and dashboards across the organization.
